

Climate Change Statement

Best Buy is a values-driven organization with a clear purpose to enrich lives through technology. We strive to be a good corporate citizen in all our interactions with customers, employees, vendor partners, shareholders, the environment and communities in which we operate.

Best Buy is working hard to address greenhouse gas emissions and climate change in a meaningful and equitable way.

We support the principles of the Paris Climate Accord, an international agreement to limit global warming below two degrees Celsius above pre-industrial levels, preferably, below 1.5 degrees. In addition, we seek to positively impact the economic, environmental and societal well-being of our communities and our planet by:

- Working toward net zero carbon emissions in our operations through the advancing of energy efficiency improvements, renewable energy deployment and the electrification of our fleet
- Helping our customers reduce their carbon emissions by offering, promoting and selling energy efficient products that will avoid more than 55 million Metric tons of CO₂e over the product's lifetime
- Engaging with policymakers in support of clean energy that minimizes or eliminates carbon emissions
- Sharing annually our progress on our commitment via The Climate Pledge to be carbon neutral by 2040 and our 2030 Science-Based Target of 75% reduction over a 2009 baseline
- Neutralizing residual emissions with additional, quantifiable, permanent and socially beneficial offsets in the fulfillment in of our goals
