

We surveyed thousands of Manufacturing, Automotive and Energy professionals to gain better insight into how they feel about their work. Here's what we learned:

Those who have adopted **AI** in their work are

## 173%

more likely to report **significantly higher levels of productivity** than those who have not.

## 78%

of respondents say **automating routine tasks boosts their productivity**, saving an estimated **3.5 hours per week**.

## 41%

of managers say **keeping their team motivated is their top productivity challenge**.

## 38%

of managers say **spending too much time in meetings and email is a top productivity challenge**.

Desk-based workers who feel more productive are

## 123%

more likely to be excited about the future of their company.
