

# PROTECT INSTITUTIONAL DATA AND PROVIDE A SAFE ENVIRONMENT

Increasingly sophisticated digital threats and risks to physical safety and health make it harder for institutions to protect students and staff

Cyberattacks on higher-ed institutions resulted in the exposure of over **1.3 million** identities in 2019<sup>1</sup>

**44% of higher education institutions** have admitted to suffering a compromise involving a mobile device in 2019<sup>2</sup>

**60%** of US colleges are limiting the number of on-campus visitors due to the COVID-19 pandemic<sup>3</sup>

Only **42%** of higher-education leaders say their lockdown hardware is fast enough to protect against on-campus threats<sup>3</sup>

## Microsoft cloud technology empowers higher-ed institutions to maximize student and staff safety, online and on campus

### Streamline security and identity management of students and staff

Make it easy to enable students and staff to get the data they need while preventing unauthorized access attempts

- Safeguard access to data and applications while maintaining simplicity for users
- Proactively apply and manage access policies and security requirements to all devices and apps
- Unlock zero-touch device provisioning, deployment, and retirement

### Protect student and faculty data, at home and on campus

Empower everyone to collaborate with confidence knowing that data, research, and work is protected

- Defend from malicious threats in emails, links, and meeting and collaboration tools
- Prevent, detect, investigate, and respond to advanced threats on your institution's network
- Increase visibility and control over data travel to SaaS applications and cloud services
- Control, label, and protect data as it traverses

### Defend institutional assets from cyber-crime

Safeguard sensitive campus systems and effectively respond to increasingly complex cyber attacks on your institution

- Understand the current state of your institution's security posture and how to improve it
- Respond to threats smarter and faster by leveraging high-quality detections and prioritization of alerts
- Maximize protection of your high-value intellectual property and research from malicious actors

### Maximize physical campus safety and health for the entire community

Promote the wellbeing and security of everyone on campus while accelerating emergency response times to potential threats

- Virtually model relationships and interactions among people, places, and devices to enable real-time security
- Control physical access to specific locations to ensure only the right people have the right access
- Provide multiple layers of protection to your IoT devices and equipment
- Automatically identify and respond to potential threats
- Build applications and tools to track, respond to, and mitigate COVID concerns
- Detect and respond to threatening or inappropriate language

Microsoft conforms to the broadest set of compliance standards and rigorous third-party audits to verify our adherence to strict security controls

## What leading institutions are saying

Durham University

"By migrating to Azure AD, we've moved the responsibility of high availability to Microsoft, who, let's face it, are scaled to do a better job than we could. Our services are much more resilient."

- **Craig Churchward**,  
Technical Specialist for Windows Platform

Keiser University

"Knowing we could control how Keiser University data is used on faculty and staff devices, and disconnect inactive sessions, helps us sleep better at night."

- **Andrew Lee**,  
Vice Chancellor of Information Technology

University of Southern Denmark

I like how Microsoft 365 capabilities work together as an ecosystem, with one window for all my security information. ... I have better analytics and detailed forensics to strengthen our overall security profile.

- **Bo S. Drier**  
IT Security Specialist

George Washington University

"It is important that our students have clean data and can move around the campus freely, but also that they feel safe."

- **Mark Albert**,  
Director of Web and Identity Services

## Leverage powerful solutions in campus safety and security

- Azure Sentinel
- Microsoft Intune for Education
- Microsoft Defender for Office 365
- Microsoft Defender Advanced Threat Protection
- Azure Information Protection
- Azure Active Directory
- Microsoft 365 Threat Protection
- Azure Security Center
- Azure Sphere IoT
- Azure Live Video Analytics
- Power Platform
- Microsoft Cloud App Security
- Microsoft Intune for education
- Microsoft Secure Score
- CyberX
- Azure Cognitive Services
