

Focal presents the Dune finish for Bathys, the must-have wireless Hi-Fi headphones with active noise cancellation

Since their unveiling in October 2022, the Bathys headphones from Focal have continued to grow in popularity among customers and the international press alike. Never a brand to rest on its laurels, this leading light in the French sound sector is now enhancing its first *Bluetooth*[®] noise cancelling headphones, with the launch of its new Dune finish as well as introducing an extra feature allowing users to adapt Bathys sound to their hearing.

BATHYS DUNE: STEP INTO THE LIGHT

Focal has designed a luminous finish to join the Bathys collection, in contrast with the existing Black Silver finish and catering to its customers' differing tastes. Applied to the headphones in their entirety, the carrying case and the cables, the Dune finish is inspired by quarry minerals, Greek landscapes and desert sands - in short, delicate spaces flooded with light. It combines a beige colour with silver details (grilles,

rings, etc.) for an elegant, mellow and harmonious finish. The neutral beige shade is easy to pair with any colour of outfit. Replicating the approach taken in the Black Silver version, Bathys Dune combines refined materials (magnesium on the yokes, genuine leather on the headband, etc.), delivers impressive comfort and features an optional backlit flame in the centre of the earcups.

NEW: HEADPHONES SOUND THAT ADAPTS TO THE USER'S HEARING

In its quest to offer its customers the very best, the Focal teams have incorporated a new feature into the headphones: the Mimi hearing test. Available via the Focal & Naim app, this allows users to configure the sound delivered by Bathys according to their hearing, thereby allowing them to enjoy the Focal sound regardless of their test results. In other words: Bathys adapts to everyone's hearing! Those with the Black Silver version now also have access to this test, by simply updating the Focal & Naim app.

PURE HIGH-FIDELITY SOUND & FEATURES

Behind the Dune and Black Silver finishes lie the same performance and features: outstanding sound for a pair of wireless headphones. Benefiting from Focal's expertise in sound and high-end headphone production, Bathys delivers a pure Hi-Fi sound, via a *Bluetooth*® 5.1 multi-point or wired connection thanks to the integrated USB-DAC mode and its resolution reaching 24bits/192kHz. Made in France, the speaker drivers comprise an aluminium/magnesium dome for deep bass, mellow treble and crystal-clear vocals. This Hi-Fi sound is enhanced by perfect soundproofing: the noise-cancelling technology includes an optimised 'Silent' mode for journeys in noisy environments (planes, trains, etc.) and a 'Soft' mode to help users concentrate at home. There is no shortage of other features, either: voice assistants, adjustable EQ, connectivity (*Bluetooth*®, Jack, USB), 30-hour battery life (5 extra hours available in 15 minutes thanks to its fast charging function), and much more.

TRAVEL WITH HIGH-FIDELITY

Product available: September 2023
