

Focal renews its K2 Power Range of iconic in-car audio kits

MADE IN
FRANCE

Focal refreshes its K2 Power line, refreshing the legendary range with speaker drivers that deliver pure hi-fi sound. New and exclusive technologies, a compact profile, refined aesthetics: Focal has evolved its historic range to further improve performance whilst preserving the K2 DNA, born with the creation of the iconic yellow cone in 1986. With the fourth generation of K2 Power audio kits, the French brand is asserting its prowess in on-board sound reproduction like never before.

K2 POWER NEW GENERATION

Evolving alongside Focal's innovation, K2 Power continues to forge its legend with this 4th generation of speaker drivers. With the iconic yellow cone and pure hi-fi sound: the K2 Power kits are dedicated to car and music lovers. Manufactured in Focal's workshops, the range includes 10 products: a coaxial kit, five 2-way component kits, one 3-way component kit and three subwoofers. It encompasses all of Focal's expertise and innovations to deliver even greater performance. Features include kits fitted with a FRAK tweeter to give your system unprecedented dynamics. Designed like a speaker driver (TMD® surround, progressive profile spider), it provides a unique sound experience inside the vehicle. Equipped with an 'M'-profile cone, it combines aluminium – enabling enhanced frequency lowering – with magnesium, working together to elevate the high-performance treble. Another major development shallow depth kits, SUB 25 KXS and ES 165 K2S, making them highly compact without losing energy. As for the design, K2 Power has had a makeover: modernised and updated aesthetics, a black finish to highlight the K2 cone and a black textured finish on the TKME tweeter.

THE BEST OF FOCAL

K2 Power stands apart due to its attributes that have made, still make, and will always make it a success: the great aramid fibre K2 sandwich cone. This Focal innovation ensures rigidity, lightness, and damping; the three essentials of a good speaker driver. Initially developed for the range of high-end Sopra loudspeakers, the TMD® (Tuned Mass Damper) surround allows you to control the effects of resonance and to drastically reduce the distortion associated with deformation of the cone. The speaker drivers take advantage of this patented technology to diffuse clearly defined midranges. Also composed of a K2 sandwich cone in aramid fibre, the TKME tweeter has an 'M'-profile allowing better control of cone deformation and precise reproduction of high frequencies up to 22kHz.
