

View clinical notes in MyClevelandClinic

MyClevelandClinic connects you to your MyChart account so you can view your providers' notes from your visit.*

How Providers Use Notes to Document Your Healthcare

Your healthcare team records details of your ongoing care and clinical status using notes in your electronic medical record. Various types of notes are created during outpatient care, a surgery or procedure, a visit to the emergency department, or a hospital stay.

The main function of a note is to provide a concise, comprehensive summary of a patient's condition for all members of the healthcare team. Notes are used for documenting clinical observations, diagnostic tests ordered, and care delivered during an office visit. There may be suspected conditions listed in a note that are not confirmed diagnoses. Although patient education is not the purpose of notes, we hope that the release of this information will enable you to become more involved and knowledgeable regarding your healthcare.

*At this time, Behavioral Health / Psychiatry notes are not available in MyChart.

Abbreviations of Clinical Terminology

It is important to understand that notes are written in a way for your doctor and other health professionals on your care team to quickly understand your current medical condition. Because of this, the language may be abbreviated. Below are the definitions for some commonly used clinical abbreviations:

| | | | |
|--------------------|---|-----------------|---|
| BMP: | Basic metabolic panel | I&D: | Incision and drainage |
| BP: | Blood pressure | IMP: | Impression |
| C&S: | Culture and sensitivity <i>(performed to detect infection)</i> | LBP: | Low back pain |
| C/O: | Complains of | N/V: | Nausea or vomiting |
| CBC: | Complete blood count | P: | Pulse |
| CC: | Chief complaint | PMH: | Past medical history |
| Chem panel: | Chemistry panel <i>(a blood test that indicates the status of the liver, kidneys, and electrolytes)</i> | PRN: | As needed |
| DDX: | Differential diagnosis <i>(the possible diagnoses being considered)</i> | R/O: | Rule out |
| DM: | Diabetes mellitus | SH: | Social history |
| DOE: | Dyspnea on exertion <i>(shortness of breath with activity)</i> | SOB: | Shortness of breath |
| ETOH: | Alcohol intake history | SQ: | Subcutaneous <i>(underneath the skin)</i> |
| H&P: | History and physical | T: | Temperature |
| HPI: | History of present illness | UA: | Urinalysis |
| | | URI: | Upper respiratory infection |
| | | VSS: | Vital signs are stable |
| | | Wt: | Weight |
