

Born in heavy duty: MAN Charge&Go is the solution for public charging

Saalfelden, 01/07/2024

MAN Truck & Bus will be presenting the new MAN Charge&Go charging service for the first time at the IAA Transportation (17-22 September 2024, Hannover). The service is aimed at users of electric trucks and, in the future, also electric coaches. The solution for public charging works across brands and is therefore also interesting for mixed fleets. MAN Charge&Go customers can use it to plan the charging of their vehicles, pay at the charging station and benefit from a collective bill at the end of the month.

The charging network of MAN Charge&Go is specially designed for commercial vehicles and is continuously being expanded to include suitable charging points. In order to ensure smooth battery charging, the charging points are tested according to a strict catalogue of criteria.

In conjunction with MAN SmartRoute, the customer receives intelligent route planning that displays suitable charging points for electric commercial vehicles along the route. This means that customers are offered a complete package, true to MAN's motto: Simplifying business. The customer receives proven 360° advice, help with setting up the required depot charging infrastructure and, with MAN Charge&Go, the solution for public charging from a single source. Since 2023 October the new MAN eTruck has been available to order in the eTGX and eTGS model series and, with its modular battery equipment, ePTO, semitrailer tractor or chassis, covers a very large proportion of applications in almost all industries.

The new MAN Charge&Go service will be launched in all relevant European countries from mid-2025.

MAN Truck & Bus is one of Europe's leading commercial vehicle manufacturers and transport solution providers, with an annual revenue of about 14,8 billion euros (2023). The company's product portfolio includes vans, trucks, buses/coaches and diesel and gas engines along with services related to passenger and cargo transport. MAN Truck & Bus is a company of TRATON GROUP and employs approx. 33,000 people worldwide.
