

Find the right security solutions on Google Cloud with our trusted partners

Be confident in your security by leveraging Google Cloud's open architecture, trusted legacy, and shared fate model

As organizations move workloads to the cloud to take advantage of its agility, scale, and resilience, they remain concerned about safeguarding data, applications, and customers in a complex, unfamiliar environment. They also worry that cloud-based solutions won't let them build on their prior software investments, leading to the time, disruption, and expense of starting from scratch.

Cybersecurity solution vendors must meet customers where they are on their cybersecurity journey and ease their concerns as they commit to the cloud. Vendors, like Google Cloud and our security partners, must engender trust, so customers are sure they are placing their resources, reputation, and revenue in good hands, that they retain control of their infrastructure, and that they have transparency into their operations.

At Google Cloud, we provide our software security partners with an innovative technology stack foundation with cutting-edge tools to help them build and integrate their security solutions. We have a boundless commitment to providing our partners with co-innovation and integration that enable their security solutions to help address today's dynamic threat landscape.

Google Cloud security partners deliver trusted security in the cloud, data centers, at the edge, and everywhere in between.

Organizations need the right tools and capabilities to build a trustworthy, innovative, scalable, and cost-effective security solution that offers consistent, practical tooling across clouds and deployments.

 **3+ Billion**

users trust Google Cloud every day.

And, organizations need a cloud provider committed to software security partners that add value with co-innovation and seamless integration, along with complementary security capabilities to leverage a full-fledged, differentiated solution.

At Google Cloud, we provide our software security partners with an innovative technology stack foundation with cutting-edge tools to help them build and integrate their security solutions. We have a boundless commitment to providing our partners with co-innovation and integration that enable their security solutions to help address today's dynamic threat landscape.

We believe that by co-innovating the next generation of security solutions with our partners, we can offer our joint customers the ability to choose from a uniquely deep and wide selection of innovative solutions to suit your cybersecurity business needs.

A foundation of trust

Google Cloud provides a foundation built from the ground up with the knowledge and experience that comes from protecting billions of users.

Retain complete control with assured workloads, access transparency, cryptographic control, confidential computing, and more.

Satisfy your regulatory and data residency requirements with a global portfolio of certifications, attestations, and audit reports, as well as Sovereign Cloud.

Streamline configuration with a global network designed for easier management across regions.

Move forward with your organization's environmental goals using the industry's cleanest global cloud.

Secure innovation

Layered over the foundation of trust are the tools and technologies that Google Cloud offers its partners so they can deliver even more security capabilities.

Data Cloud enables organizations to digitally transform a unified, open, intelligent data cloud platform with built-in AI and ML capabilities.

Open Infrastructure Cloud supports the freedom to securely innovate and scale from data centers to edge to cloud on an easy, transformative, and open platform.

Trusted Cloud puts data protection at the core of everything we do. We help partners and customers protect what's important with advanced security tools.

A valuable partner

The security partner layer builds on the previous two. Partners leverage Google Cloud tools to build capabilities and integrations, providing our shared customers with a security solution that meets their unique needs.

Get deep API-enabled integration to Google Cloud tools, services, technologies, and capabilities for a seamless user experience.

Benefit from a history of co-innovation with leading security vendors already leveraging Google Cloud's unique capabilities to build best-of-breed solutions that complement Google Cloud's native security.

Use market-leading analytics capabilities that can help security companies build the next generation of analytics to reduce false positives.

Google Cloud supports its partners with the belief that a vibrant and active security partner ecosystem will speed innovation, create value for customers, and drive growth.
