# INVESTMENT REPORT OCTOBER 2024

## RETROSPECT

for the period August 31, 2024 until September 30, 2024

Sometimes things happen very quickly - in September, the ACATIS QILIN Marco Polo Asien Fonds delivered a fantastic performance of +23.6%, and the trend continued into October. At our roadshow in early September, we talked about the opportunities in small caps and Chinese stocks. Now, Chinese stocks have done spectacularly well as a result of supportive government measures. While small caps have not done as well by comparison, history has shown that the recovery in small caps also occurs in short spurts. Other than the Chinese fund, the month of September was rather quiet, with average monthly performances of +0.6% (equity funds), 1.2% (balanced funds) and 1.5% (bond fund).

## POSITIVE DEVELOPMENTS

### Individual stocks

**BioNTech (+33.5%):** BioNTech is waking from its slumber. Share price developments suggest the possible presence of a buyer, although the higher share price may also be due to the latest BioNTech presentation at the European Cancer Conference (ESMO). The first diagram in the presentation shows BioNTech's approach of fighting cancer with a triad of immune modulation, mRNA injections and patient-specific Car-T therapies. Research progress is rapid, and the share price follows in its wake.

**China Resources Gas (+18.7%):** In the last annual report, the forecasts for the entire year continued to be positive; connections are expected to increase to over 2.9 million in the second half of the year. Moreover, financing and administration costs have also decreased and are expected to be lower in the second half of the year, so that additional free cash flows make way for a higher distribution.

**Palantir Technologies (+17.2%):** At an AI conference in September, several well-known clients presented their solutions that were developed by Palantir, along with the verifiable impact on costs and income.

## NEGATIVE DEVELOPMENTS

### Individual stocks

**Novo Nordisk (-16.1%):** It appears the US Congress thinks that the company's popular weight-loss injections are too expensive. The CEO was asked to appear before Congress. Another reason for the recent drop in Novo Nordisk's share price: weak study results for the test compound Monlunabant. After 16 weeks, study participants in a Phase 2a study had a relatively small reduction in weight (7.1%).

**Regeneron Pharmaceuticals (-12.0%):** Regeneron has accused Amgen of violating dozens of its patents. The district court for the northern district of West Virginia declined Regeneron's application for an injunction, which would have prevented Amgen's Pavlu medication from entering the market.

**Skyworks Solutions (-10.6%):** In September, sales figures for Apple's new iPhone 16 were lower than expected; this also put pressure on suppliers' share prices. Skyworks Solution makes the antennas that are built into Apple's devices; initially, the company's share price fell following the release of the tepid sales numbers.

# INVESTMENT REPORT OCTOBER 2024

## NEW DEVELOPMENTS

for the period August 31, 2024 until September 30, 2024

In the political arena, the retirement savings account (Altersvorsorgedepot) initiative continues (see our website from the year 2019 [www.altersvorsorgedepot.de](http://www.altersvorsorgedepot.de)). The federal government has submitted a ministerial draft bill for reforming the private pension scheme, which is supported by tax incentives. The law could be adopted now, but all parties are permitted to have their say first. ACATIS has also submitted its comments through the BVI association. Essentially, this would create an account for private retirement savings that is subsidised by the government and that remains tax-free until withdrawals are made in retirement. This is followed by an annuitization over 20 years, or until the end of life.

After decades of making private retirement savings less attractive due to taxes (yes, there was a time when gains outside the speculation period were tax-free!), there is now a movement back to private retirement provisions. It is likely that government pensions will not be able to fulfil their objectives (because there will be too many pension recipients compared to pension payers due to demographic trends). Similarly, the "generational capital" (as a government-financed contribution to the retirement provisions in the pension fund) will not nearly be enough. This is why individual retirement savings accounts are the right complementary step, even if it is not the perfect solution. Policy-makers have destroyed the Riester accounts by insisting on guarantees during the negative interest phase. Hopefully they will stay out of the retirement savings accounts in the future!

## PURCHASES

Additions to the international equity funds

- **Halozyme Therapeutics:** Using Halozyme's carrier enzymes, medication can now be injected directly under the skin, instead of being gradually added to the vein as an intravenous infusion over a period of several hours. It reduces the pressure on patients and lowers health care costs. Pharmaceutical companies such as Roche or Pfizer are responsible for the costs and risks associated with developing the medication, while Halozyme makes its money with treatments. A good and highly-profitable business model.

## SALES

Divestments from the international equity funds

- **Nabtesco:** This Japanese producer of gearboxes and braking systems for trains was a secondary position in our sustainable equity fund; it was sold after quarterly numbers continued to show weakness. Despite the positive growth outlook in the robotics gearbox segment, profitability was still below our expectations.
- **Super Micro Computer:** Super Micro Computer (SMC) was one of the big winners of the AI wave of the last few months. Demand for data centre equipment was high, and SMC was able to deliver. After mind-boggling share price increases, we gradually sold our position. We are now selling the remaining position completely, as we do not like some related-party transactions.

Divestments from the international balanced funds

- **Smurfit Westrock:** Our residual position in Smurfit Westrock was sold after the merger, as we find it difficult to assess the merger between the two companies. We will wait for the next consolidated numbers before making a new investment.

# INVESTMENT REPORT OCTOBER 2024

## OUTLOOK AND RETROSPECT

Fall is the season of conferences in Germany. In Frankfurt and Munich, companies are making presentations to their investors, accompanied by the research teams of their brokers. These conferences are a good way to keep our fingers on the pulse of investors and the economy, to corroborate expectations, to identify failures and to discover hidden champions.

What someone gets out of these conferences will depend on their subjective view of their own participation. Visits to large German companies resulted in depressive thoughts. On the other hand, visits to small and interesting firms elicited a lot of optimism.

Foreign investors are not very interested in German companies. The best performers in the DAX include Siemens Energy (after many difficult years), Rheinmetall and MTU (beneficiaries of the situation in Ukraine), Commerzbank (is being taken over) and SAP (the only German global star of the last 30 years). The banks are only average players in Europe, the automotive industry is grappling with vague political requirements, Chinese competition and expensive corporate restructuring, while the chemical sector suffers under the high energy costs. However, German reinsurers are still among the world's top companies. And there are also quite a few less well-known second-tier German companies, without which the world would come to a standstill. Here are some examples from the IT sector.

The trend towards artificial intelligence is exponential and boasts enormous growth rates, both with respect to hardware and software. Behind a simple search query in Google or ChatGPT stands a data system in a large computer. Electrons travel through data lines, responses are processed and sent back. This uses electricity and generates heat.

- Artificial intelligence is expensive. It is said that the newest models of artificial intelligence in training will cost anywhere from EUR 1 billion to EUR 10 billion in computing time in the future. An elegant response presented by Google is the product of a veritable battle of materials that requires enormous investments: for the computers in the data centre, for the building, for electricity, cooling and data transport. This is where we once again encounter German and other European companies.
- Europe has been successful in failing to build a large computer industry. Not much has remained of Zuse, Nixdorf, ICL, Bull, Thomson, Olivetti, Olympia, and Commodore. Fortunately, there are quite a few European companies that supply the large US and Asian computer names of the present.
- Let's start with computers: the new, super-fine structures on the chips require lighting and inspection devices that come from Germany (Zeiss, Jenoptik, Trumpf) and are mounted at AMSL in the Netherlands. The large electric currents are controlled with performance electronics made by Infineon. According to Infineon, the total energy consumption of these computers will quadruple in the next six years. Performance electronics by Infineon are found in every data centre - and also in quantum computers based on ion trap technology. Steaming for the high-performance processors (silicon carbide or gallium arsenide) is provided by the dominating market player Aixtron.
- The energy that is required for the data centres is added to the already growing global energy requirements. According to the CEO of Oracle, 1,000 to 2,000 new data centres will be required in the next few years. This is why nuclear plants (Three Mile Island or Westinghouse) are being re-activated or re-designed, solely for the purpose of supplying energy to data centres. The expertise for building nuclear reactors has largely disappeared in the West, but it can still be found at Westinghouse, half of which is owned by Cameco and Brookfield, respectively. There are private companies that want to provide fourth- or fifth-generation mini nuclear reactors. One example is Copenhagen Atomic.
- Linking electric grids requires electric cables that are made by Italian company Prysmian and its competitors Nexans and TDK. Smoothing out electricity production requires equipment built by the German companies Nucera (electrolysis systems) and SFC Energy (fuel cells). Undersea cables are supposed to transport energy from e.g. Africa to Europe. Companies such as ABB, Schneider or Siemens are big players in these segments.

In short - even if Europe (and particularly Germany) do not look as good from a market point of view, there are a number of fast-growing and neglected stocks in the second tier, or among the "boring stocks". Their time will come.

# REPORT ON THE ECONOMIC SITUATION

10/2024

## A fall season of decisions?

Exclusive report for ACATIS Investment: Prof. Dr. Dr. h.c. Lars P. Feld, University Freiburg and Walter Eucken Institute

Following the state elections in Brandenburg, Thuringia and Saxony, some in the federal government said that decisions will have to be made in the fall if the present government is supposed to last until the regularly scheduled federal Bundestag elections in September 2025. Accordingly, many are speculating about a premature end to the current government coalition. However, these announcements were rather vague; which decisions are they talking about?

Now that Germany's minister for economic affairs Habeck has submitted the government's fall projections, which include a 0.5% downward adjustment in the GDP growth rate for the current year (to -0.2%), and a slight upward correction for economic growth in 2025 (to 1.1%), there are now calls for an economic programme. Indeed, 2024 will be the second year in a row when Germany's GDP actually shrank. The last time this happened in the post-war period was in 2002 and 2003, after 9/11. What needs to be done to get the German economy back on a solid footing?

An analysis of the current situation illustrates that stimulating the economy for the purpose of stabilising demand does not make a lot of sense. Reticence on the part of consumers and weakness in corporate investments are primarily due to economic uncertainty, to which the federal government has also contributed. It would be too simple to say that this is just due to the in-fighting between the coalition partners. Because the real problem is that economic policy is manoeuvring between controlling investments and a social market economy. Private consumption and investments will return once policies are clearly on a market-oriented course.

Which brings us back to the decisions that need to be made in the fall. By the end of the year, the federal government, Bundestag and Bundesrat have to decide on the 2025 federal budget, a growth package, a pension package and labour market measures. Some of these decisions have to be approved by the federal states in the Bundesrat. In addition, the Bundestag factions of the current government coalition are openly questioning these legislative initiatives.

Even though everyone should know what needs to be done to get the German economy back on course: Improving the cost situation for companies. Labour, energy and regulatory costs, as well as taxes, are too high. The growth package addresses this situation in several ways. However, there is disagreement between the federal government and the federal states, particularly with regard to the tax-related measures. Individual changes to tax laws, such as tax relief for foreign em-

ployees, have already been dismissed for political reasons. The left wings of the Social Democrats and Greens do not want to see more restrictions applied to the Bürgergeld. The Wage Loyalty Law (Tariftruege-setz) would tighten rather than ease existing labour laws. The FDP has taken a very critical view of this initiative, and the so-called hold line in the statutory pension insurance scheme. Another thing the SPD and Greens want to see in the 2025 budget is the removal, easing or at minimum suspension of the debt brake (Schuldenbremse).

The 2025 federal budget allows for the implementation of the growth package and the associated reduction in revenue, and it shifts the focus of consumption expenditures to public investments, without violating the requirements under the debt brake. This approach is correct per se in terms of supply policy. However, the growth package is just a small step, even if it is approved by the Bundesrat with only minor changes. Particularly with regard to energy and climate policies, companies still do not know what they have to prepare for. Permanent subsidies such as an industrial electricity price do not help in this context. The real issue is securing future energy supplies at reasonable prices. There are still questions surrounding the design of the electricity market and the supply of alternatives to coal and gas.

In terms of labour market and social policies, some in the federal government still want to expand benefits and increase regulations. The hold line in statutory pension insurance cannot be implemented in its current version if the system is to remain financially affordable. Ideally, the Wage Loyalty Act should not be passed. It would undo the progress that has been made in reducing red tape by regulatory easing.

A fall season of decisions? It must result in a shift in economic and financial policies, a policy oriented towards a market economy, a strengthening of market forces instead of higher government expenditures based on debt. In the early 2000s, when the GDP fell after 9/11, the federal government responded with Agenda 2010. The current coalition government does not have a lot of time to return the economy to a market-oriented course.

Sincerely yours

Prof. Dr. Dr. h.c. Lars P. Feld

# ACATIS AI GLOBAL EQUITIES

AS OF: SEPTEMBER 30, 2024

## Global equity fund, from artificial intelligence, defensive, Art. 8 (SFDR)

### INVESTMENT PHILOSOPHY AND PROCESS

The fund lost 0.8% in September; while the benchmark gained 1.0% in the same period. The three best performing companies last month were Progress Software (+14.9%), Boliden AB (+9.9%) and Trimble (+8.6%). The three worst performing companies are Verint Systems (-20.4%), Dometic Group (-13.4%) and Qorvo (-11.6%). Progress Software, the developer of AI-supported infrastructure software, achieved year-on-year sales growth of 2% in the third quarter with an operating margin of between 15% and 20%, which was above expectations. The outlook for the year was also raised. The acquisition of ShareFile, a document collaboration company, was also positively received. Verint Systems, a provider of customer experience automation software, delivered quarterly results that were below expectations, with a 1% decline in sales compared to the previous year.

### INVESTMENT OBJECTIVE

For this fund, the objective is to maximise yield without risk limitations. Using artificial intelligence, this fund aims to outperform the benchmark. The combination of machine learning methods and the knowledge and experience of a successful investment team is supposed to be the key to success.

# ACATIS AKTIEN GLOBAL FONDS

AS OF: SEPTEMBER 30, 2024

## Global equity fund, aggressive, Art. 8 (SFDR)

### MARKET COMMENTARY

The fund performed -0.2% in September. For the year to date, it is up 14.4% and thus behind the benchmark index. Unsurprisingly, two Chinese companies are among the top 3 positions: Pinduoduo (the parent company of Temu), up 39.1%, and China Resources Gas, up 18.7%. Another Asian stock, Kurita Water, is also in the top 10 with a gain of 6.7%, while BioNTech is in second place, up 33.5% after a long dry spell - a well-deserved recovery. The month under review was characterised by two important events: presentations at the European Cancer Congress ESMO on the topic of combination therapies and, directly after the end of the month, an exciting presentation on the use of artificial intelligence at Instadeep and its parent company BioNTech. Apart from this, the biotech sector performed poorly, with companies such as Novo Nordisk, Genmab, Regeneron and Vertex among the losers.

### INVESTMENT OBJECTIVE AND - PHILOSOPHY

The fund invests mainly in companies that have been chosen based upon fundamental "bottom-up" analysis of individual stocks. The selection adheres to classical shareholder value aspects. The fund invests in companies that are undervalued according to criteria as: undervalued net asset value, high earnings power (that is not reflected in the stock price), above-average dividend yield, neglected industries or countries, overrated crises. The fund is invested in accordance with Art. 8 of the EU Disclosure Regulation. ACATIS has defined 54 sustainability criteria that investors have rated as "very important". Exclusion criteria were defined by the majority of those surveyed. Companies that breach these requirements are only supposed to be included in the portfolio if their cumulative portion does not exceed 10% of fund assets. This ratio of 10% is supposed to apply as of mid-2022.

# ACATIS FAIR VALUE DEUTSCHLAND ELM

AS OF: SEPTEMBER 30, 2024

## Equity fund Germany, aggressive, sustainable, Art. 9 (SFDR)

### MARKET COMMENTARY

In September, the fund was virtually unchanged at -0.4%. The top 3 stocks in September were Nexus, Süss Microtec and Kronen, which together contributed 1.3% to performance. No significant financial information was available for the companies mentioned. The next important data point will be the Q3 reporting season. The interest rate turnaround has been initiated. The European Central Bank (ECB) cut its key interest rates by 25 basis points to 3.5% on 12 September 2024. This was the second interest rate cut this year. Interest rates also fell in the USA for the first time since 2020. We assume that this could be the starting signal for a future outperformance of second-line stocks. Analyses show that after a downward turn in interest rates, small caps will outperform large blue chips. Over 90% of the fund is currently invested in small caps. The fund should then benefit disproportionately from this.

### INVESTMENT OBJECTIVE AND - PHILOSOPHY

The fund is suitable for all investors, who want to invest their capital based on proven strategies within value balanced structures in German equity markets. The fund management pursues an anti cyclical stock selection. Stock picking is free from any Benchmark. The portfolio is almost fully invested. Role model is the value strategy from Warren Buffett, the most successful investor of all-time.

# ACATIS QILIN MARCO POLO ASIEN FONDS

AS OF: SEPTEMBER 30, 2024

## Equity fund Asia with focus on China, aggressive, Art. 6 (SFDR)

### MARKET COMMENTARY

The fund gained a sensational 23.6% in September, while the benchmark index rose by 4.2%. The Chinese government announced an aggressive economic stimulus programme to revive the economy, stabilise the property sector and support the stock market. The stimulus package is the largest in recent history and also includes stimulus measures to support the stock market. East Money (+88%), Ali Health (+77.7%) and JD (+55.9%) were the best performers in the fund, while Samsung Electronics (-1.6%), Infosys (-4.3%) and Nintendo (-3.4%) lost the most value. East Money, China's largest online platform for financial and brokerage services, benefited from investors investing heavily in equities following the government's stimulus package. Samsung Electronics, one of the world's largest electronics manufacturers, suffered from declining sentiment on the South Korean stock market and challenges in the memory chip industry.

### INVESTMENT OBJECTIVE AND - PHILOSOPHY

This actively-managed fund invests at least 51% in companies whose headquarters are located in Asia or whose business activities are concentrated in Asia. The investment universe includes mainly shares of Chinese companies that are eligible for investments through Stock Connect (Shanghai and Shenzhen), as well as Chinese companies that are listed outside of the Chinese mainland. Also shares of other Asian countries, e.g. Japan, India, Indonesia, Vietnam, Thailand, Malaysia and Korea. Management is assisted by local research partner Qilin. The MSCI AC Asia GDR (EUR) is used as a reference index. The fund does not strive to depict the reference index, but rather aims for absolute value growth that is independent of the reference index. The fund may enter into derivative transactions to hedge asset positions or generate higher values.

# ACATIS DATINI VALUEFLEX FONDS

AS OF: SEPTEMBER 30, 2024

## Global balanced fund, aggressive, Art. 6 (SFDR)

### MARKET COMMENTARY

With an increase of 2.0% in September, the fund regained some momentum. Three China-orientated positions stood out: Kingdee (+45.3%), CATL (+37.2%) and the certificate on the recovery of the Chinese market (+27.6%). The British Oxford Nanopore gained 37.3% and BioNTech 33.5%. Two significant events characterised the reporting month for BioNTech: numerous presentations at the European Cancer Congress ESMO on the topic of combination cancer therapies and an exciting presentation on the use of artificial intelligence at Instadeep and the parent company BioNTech directly after the end of the month. The loser stocks were mainly small caps. In September, we sold Booking completely on the assumption that the overheated travel market had reached a peak.

### INVESTMENT OBJECTIVE AND - PHILOSOPHY

The fund takes advantage of situation dependent and opportunistic investment opportunities. In doing so, the investment level can flexibly vary from 0 to 100%. The focus is on the value investing concept, however, not only with regards to equities but to all investment classes. In principle, the fund aims at long-term investments. The outlook for different investment classes and sub-segments will be verified at regular intervals. Investments will then be made on the basis of target funds or a basket of individual titles. Derivatives may be used to enhance the chances or reduce the risk.

# ACATIS FAIR VALUE MODULOR VERMÖGENSVERWALTUNGSFONDS

AS OF: SEPTEMBER 30, 2024

## Global balanced fund, flexible, sustainable, for endowments, Art. 9 (SFDR)

### MARKET COMMENTARY

Overall, the fund price rose in September (+0.6%), despite the currently rather defensive nature of the partial hedge. Good things come to those who wait! After a dry spell lasting several months, two of our pioneers in the fund made a strong comeback in September: BioNTech, one of the largest positions, once again published very good study results and the stock market became increasingly confident about the company's future potential. The share price rose by 33.6%. And in the case of Oxford Nanopore, it was the very good half-year figures that finally brought the share some attention and caused it to rise by +37.3% in September. We are convinced that the end of the line is far from being reached for both stocks in the long term and that patience will pay off in the end. In contrast, the capital market is still demanding a little patience from our small positions in the two pioneers Carbios (-18.3%) and Hoffmann Green Cement (-22.5%).

### INVESTMENT OBJECTIVE AND - PHILOSOPHY

The fund aims for sustainability. Only issuers that fulfil ethical-sustainability criteria and comply with high standards with respect to social, business and ecological responsibility and environmental sustainability are accepted. These are companies with regard to entrepreneurial, social and ecological responsibility and ecological sustainability, and which are chosen in accordance with the very strict criteria pursuant to Article 9 of the EU Disclosure Regulation. Individual sustainability objectives are taken into account on the basis of continuous discussions with investors. Moreover, each title also pursues at least one of the sustainable development goals of the United Nations (SDGs). The fund invests globally in stocks, REITs, bonds, profit participation certificates and other innovative investment instruments, such as income trusts or certificates that contain financial indices, stocks, interest rates and foreign currency as the underlying asset.

# ACATIS VALUE EVENT FONDS

AS OF: SEPTEMBER 30, 2024

## Global balanced fund, flexible, Art. 8 (SFDR)

### MARKET COMMENTARY

The fund gained 0.5% in September. Statistically speaking, the second half of September is often weaker in terms of performance, but this was not the case this year. Despite geopolitical uncertainties, such as the risk of escalation in the Middle East conflict, the markets and our fund performed extremely well. The biggest value drivers in the portfolio were Prosus (+17.1%) and Naspers (+16.6%). However, the rise in share prices was due less to fundamental developments than to monetary policy stimuli from China. The Chinese central bank cut interest rates by around 25 basis points and provided loans and swaps for Chinese insurers and banks in order to support share buybacks and the broad market. This also had a positive effect on Tencent (approx. +16%), as this share makes up the largest share in the Prosus portfolio. In addition, Deutsche Wohnen (+15.3%) also rose sharply after Vonovia decided to accelerate its takeover of Deutsche Wohnen.

### INVESTMENT OBJECTIVE AND - PHILOSOPHY

The fund combines the philosophy of value investing with an "event-driven value" approach. The aim is to reduce fundamental risks in the selection of the fund's positions by focusing on companies with strong business quality. The fund is invested in accordance with Art. 8 of the EU Disclosure Regulation. ACATIS has defined 54 sustainability criteria that investors have rated as "very important". Exclusion criteria were defined by the majority of those surveyed. Companies that breach these requirements are only supposed to be included in the portfolio if their cumulative portion does not exceed 10% of fund assets. This ratio of 10% is supposed to apply as of mid-2022.

# ACATIS IFK VALUE RENTEN (EUR)

AS OF: SEPTEMBER 30, 2024

## Global fixed-income fund, aggressive, Art. 6 (SFDR)

### MARKET COMMENTARY

As in the last two months, the fund reached a new all-time high in September. The fund gained +1.5%, for the year it is +9.8%. With the new all-time high in July, our fund was one of the first bond funds to achieve this. With a new Grenke issue and a tender, the term was extended by 3 years and the yield increased by 1.5% to 5.1% (stable BBB rating). We continue to see a recovery in bonds, supported by the interest rate cut fantasy and the so-called "pull-to-par" effect. Credit markets and corporate bonds should continue to benefit from this. The fund has earned around 130% since its launch in 2008. Absolut Research ranks the fund among the top 10% over 3, 5 and 10 years. In addition, the fund was awarded 5 out of 5 Lipper Leaders in the categories total return and consistent return. With a duration of around 3.3 years and a yield of 6.5% in the fund, we are confident for the rest of the year and for 2025.

### INVESTMENT OBJECTIVE AND - PHILOSOPHY

Assets under management are mostly invested in bonds of issuers selected on the basis of traditional bond analysis. The focus is on identifying value bonds that offer a particular yield advantage relative to their valuation. The fund therefore invests in a broadly diversified portfolio of undervalued bonds and focuses both on distributions in the form of interest and on capital gains. The fund therefore invests in a broadly diversified portfolio of undervalued bonds and focuses both on distributions.

# Opportunities and risks of investing in ACATIS investment funds

Date: 2024

## OPPORTUNITIES

- **Professional Asset Management**

With an investment in an ACATIS investment fund, investors benefit from the extensive experience and expertise of the portfolio management team and comprehensive financial research.

- **Value Growth**

A variation of market-, sector- and company-related factors leading to the increase in the share price as well as foreign exchange gains offer attractive earning opportunities.

- **Interest or Dividend Payments**

Some securities also include dividend payments by the issuer, of which funds can benefit.

- **Risk Diversification**

By investing across a wide range of securities, the investment risk is reduced compared to an individual investment.

- **Flexibility**

Investment funds of ACATIS can be bought and sold daily.

- **Transparency**

The fund unit prices and valuations of the investment funds are published each trading day.

- **Security**

Even if the investment company were to go insolvent, the assets of the equity fund would remain insolvency-proof.

- **Sustainability opportunity**

Investments in securities of sustainable companies can offer a long-term above-average perspective due to the increasing importance of sustainable issues.

## RISKS

- **Incorrect Assessments**

Incorrect assessments may occur during the investment selection process.

- **Value Loss**

Price losses due to a variation of market-, sector and company-related factors as well as foreign exchange losses are possible.

- **Issuer Risk**

The creditworthiness of a company or a security issuer may deteriorate. Interest or dividend payments may be lost as a result, or the equity may become worthless in the event of an issuer default.

- **Increased Price Fluctuations**

Increased price fluctuations may occur as the risk is concentrated in specific countries, regions, sectors and issues.

- **No Protection For The Capital Employed**

The fund unit price can fall below the price at which the unit was purchased. The entire capital that has been invested may be lost. Past performance is not a guarantee for future returns.

- **Sustainability Risks**

Sustainability risks are environmental, social or governance events or conditions, the occurrence of which could have a material adverse effect on the value of the investment. Sustainability risks can lead to a significant deterioration in the financial profile, liquidity, profitability or reputation of the underlying investment.

- **Other Risks**

Counterparty and/ or liquidity risks may arise depending on the security and/ or fund.

- **Costs**

One-time and recurring costs are charged against the fund unit price.
