# Gain from optimal animal welfare and meat quality

The CO<sub>2</sub> stunning system ensures safe stunning of a group of hogs with high animal welfare, high hygiene levels and safety for stunning operators.

Driving mechanisms and sensors are positioned outside the machine to minimize wear and tear and to keep service during break down at a minimum.

In comparison to a conventional manual runway operation, combining the CO<sub>2</sub> stunning system with the automated runway system results in the following advantages:

- Higher productivity and yield optimization
- Improved meat quality due to improved animal welfare
- Improved work environment with reduction of noise level in the runway area
- Reduction in operators driving hogs to the CO<sub>2</sub> stunner
- Smooth handling and flow of hogs to the CO<sub>2</sub> stunner

#### Hygiene

With a hygienic design, the CO<sub>2</sub> stunning system meets the strictest demands on hygiene.

The stunning system is equipped with a wash-down cleaning system. After work has been finished, the cleaning system automatically cleans the outside (and partly the inside of the gondolas), considerably reducing the total time for cleaning. And as all internal machine surfaces are smooth, this also contributes to minimum cleaning time.

#### Why the CO<sub>2</sub> stunning system!

- Improved meat quality ensured by quick transfer of the animals into a controlled CO<sub>2</sub> concentration
- Reduction of stunning operators by use of group wise stunning
- Wash-down cleaning system
- Optimal machine durability and operation time through the latest technology, as it is equipped with a central lubricating system and gondolas moving in an optimum combination of accelerations, speeds and decelerations
- Minimized maintenance and service through easy access to electrical and other vital parts

### Safety and legal requirements

The CO<sub>2</sub> stunning system is CE approved and designed to meet the strictest demand on health and safety.

#### **Technical data**

Capacity	Varies from 145 to 1,400 pigs per
	hour dependent on type of plant
Dimensions	Length according to type of plant
	Height and width according to
	application
CO <sub>2</sub> Outlet temperature	20-30°C/68-86°F
CO <sub>2</sub> Quality	Food grade quality
Consumption	
Power supply	400V/50Hz/3P
	Other voltages and frequencies
	are available on request
Electricity	10-35 kW
Air	0.02-0.035 Nm³ per pig
CO <sub>2</sub>	200-300 g/0.44-0.66 lb per pig

Technical data may be subject to changes
